Design System Specification: The Organic Minimalist

This design system is a bespoke framework crafted for a high-end, functional F&B experience. It moves beyond standard Material Design by embracing "Organic Minimalism"—a philosophy that prioritizes breathability, tonal depth, and editorial precision. By replacing rigid structural lines with soft atmospheric transitions, we create a digital environment that feels as fresh and intentional as a farm-to-table culinary experience.

---

1. Creative North Star: The Digital Curator

The goal is to move away from "app-like" density toward an "editorial-first" layout. We treat every screen as a curated page.

- **Intentional Asymmetry:** Use the spacing scale to create rhythmic shifts in content. Don't center everything; let white space act as a functional element that guides the eye.
- **Atmospheric Depth:** Instead of shadows that suggest "elevation," use color shifts that suggest "substance."
- **Quiet Authority:** We do not use loud accents. Trust is built through the sophisticated use of green tonalities and impeccable typography.

---

2. Color & Surface Philosophy

The palette is rooted in nature, utilizing a sophisticated range of greens and warm neutrals to establish a calm, premium atmosphere.

The "No-Line" Rule

Strict Mandate: Designers are prohibited from using 1px solid borders for sectioning or containment. Boundaries must be defined solely through:

1. **Background Shifts:** Transitioning from `surface` (#f9f9f7) to `surface-container-low` (#f4f4f2).
2. **Tonal Transitions:** Using `pale-green` (#D8F3DC) to highlight a specific functional area.
3. **Negative Space:** Utilizing the `spacing-12` (4rem) or `spacing-16` (5.5rem) tokens to create mental separation.

Surface Hierarchy & Nesting

Treat the UI as a series of stacked, physical layers.

- **Base Layer:** `surface` (#f9f9f7) – The canvas for the entire experience.
- **Content Sections:** `surface-container-low` (#f4f4f2) – Subtle differentiation for large blocks of content.
- **Interaction Cards:** `surface-container-lowest` (#ffffff) – Pure white cards placed on low-tier backgrounds create a "lifted" feel without needing heavy shadows.
- **Signature Textures:** For high-impact areas (Hero sections, Primary CTAs), use a subtle linear gradient from `primary` (#0f5238) to `primary_container` (#2d6a4f) at a 135-degree angle. This adds "soul" and prevents the green from appearing flat or clinical.

---

3. Typography: Editorial Authority

We use **Inter** as our core typeface, but we manipulate its weight and scale to mimic high-end print media.

Level	Token	Size	Weight	Color	Use Case
Display	`display-lg`	3.5rem	600 (Semi-Bold)	`on-background` (#1a1c1b)	Hero statements / Impactful numbers
Headline	`headline-md`	1.75rem	600 (Semi-Bold)	`on-background` (#1a1c1b)	Section titles / Core headers
Title	`title-lg`	1.375rem	500 (Medium)	`on-background` (#1a1c1b)	Card titles / Form headers
Body	`body-lg`	1rem	400 (Regular)	`on-surface-variant` (#404943)	Primary reading text
Label	`label-md`	0.75rem	600 (Semi-Bold)	`primary` (#0f5238)	Utility / Metadata / Buttons

Director's Note: Use `on-surface-variant` for body text. The slight grey reduction from pure black prevents "visual vibration" and makes long-form reading feel effortless.

---

4. Elevation & Depth: The Layering Principle

Ambient Shadows

When a floating element (like a FAB or Navigation Bar) is required, use "Ambient Shadows."

- **Blur:** 24px - 40px
- **Opacity:** 4% - 6%
- **Color:** Use a tinted version of the surface: `rgba(15, 82, 56, 0.08)` (Primary green at 8% opacity). This creates a glow rather than a dark shadow.

Glassmorphism & Translucency

For overlay elements (Modals, Dropdowns), utilize the "**Frosted Glass**" effect:

- **Background:** `surface` (#f9f9f7) at 80% opacity.
- **Backdrop-blur:** 12px to 20px.
- This ensures the brand colors bleed through the UI, making the interface feel integrated and modern.

---

5. Component Guidelines

Buttons (The "Pill" Intent)

All buttons follow the `DEFAULT` (8px) roundness for a sturdy, professional feel.

- **Primary:** Gradient background (`primary` to `primary_container`), `on-primary` text. No shadow.
- **Secondary:** `surface-container-highest` background, `primary` text.
- **Tertiary:** No background. `primary` text with an 8px padding.

Cards & Lists

Strict Rule: No dividers.

- Separate list items using `spacing-4` (1.4rem) of vertical white space.
- Grouping is achieved by placing items on a `surface-container-low` (#f4f4f2) background with 8px corner radius.

Input Fields

- **Default State:** `surface-container-high` background. No border.
- **Focus State:** `primary` ghost border (outline-variant at 20% opacity).
- **Label:** Use `label-md` positioned strictly above the field, never floating inside.

Signature Component: The "Hero Stat"

For F&B metrics (e.g., Sustainability scores, Hero counts), use a `display-sm` value paired with a `label-sm` subtitle, encased in a `secondary_container` (#92f7c3) rounded box to provide a focal point of "Green Success."

---

6. Do’s and Don’ts

Do:

- **Embrace White Space:** If a layout feels "empty," it is likely correct. Resist the urge to fill space.
- **Layer Tones:** Put a White card (`surface-container-lowest`) on a Warm White background (`surface`) for a sophisticated lift.
- **Use "Ghost Borders":** If a border is absolutely required for accessibility, use `outline-variant` at 15% opacity.

Don’t:

- **Don't use #000000:** Always use `on-background` (#1a1c1b) for text to maintain the "warm" feel.
- **Don't use Red/Gold:** For error states, use the designated `error` (#ba1a1a) and `error_container` tokens. Never use "Warning Gold."
- **Don't use Shadows for everything:** 90% of hierarchy should be achieved through background color shifts, not shadows.
- **Don't use Dividers:** Lines clutter the mind. Use space to separate ideas.
